Company description - Propulsion and Maritem Services

*At **Propulsion & Maritime Services**, we specialise in providing interim management and project management solutions. Our comprehensive range of services includes technical inspections, dedicated service support and the adept handling of technical issues. We have a strong reputation in the maritime industry, both nationally and internationally, but our expertise is not limited to this sector.*

Interim management

Propulsion & Maritime Services offers temporary management support when an organisation requires a short-term solution to an operational challenge. This can be due to a manager's absence due to illness, or when a new direction is required and a 'change of management' and 'change of mindset' needs to be implemented promptly. We assist our clients in enhancing their work processes to achieve greater efficiency and cost-effectiveness. The objective is for the organisation to adopt the new way of doing things.

Project management:

Depending on the customer's requirements, Propulsion & Maritime Services can support or lead a project. In the preparation phase of repair, conversion, refit and new construction projects, we initiate proceedings by mapping out the work to be carried out with clear agreements with all parties involved, and we also draw up a project plan with the various milestones and associated costs. During the implementation phase, we supervise the project in detail and monitor progress. Any additional work is carried out in consultation with the client, and ultimately, we take over the project and provide clear reports for both the technical and financial settlement.

Services overview:

- As Superintendent, we are responsible for the preparation and supervision of new construction projects, conversions, renovations, repairs and other site activities.

In addition, we offer consultancy on propulsion-related challenges, including engines, gearboxes, propeller shaft lines, propeller shaft seals, CPP and FPP propulsion systems, azimuth thrusters, bow thrusters and rudder installations.

- P&MS offer a comprehensive service for CPP and FPP propulsion installations, azimuth/retractable thrusters, tunnel thrusters, bow thrusters, propeller shaft seals and rudders.

- P&MS conduct independent damage investigations and Root Cause Analysis (RCA).

- P&MS is available for consultation on technical challenges and provide second opinions for any repair solution upon request.
